

# ECO-Drone

## Environmentally Conscious Operations

Scientists and resource managers are concerned that acute or chronic disturbance of wildlife can significantly impact animal health and wellbeing. To eliminate or reduce disturbance from your drone, please follow the guidelines on the back of this card.

### Environmentally Conscious Operations of your Drone

**Know Before You Go** – understand the airspace, regulations, and surrounding National Park, Sanctuary, or Wilderness Areas. Check your AirMap app and with local resource agencies.

**Respect all Wildlife** – the Endangered Species Act, Airborne Hunting Act, and Marine Mammal Protection Act prohibit the disturbance of a variety of species.

**Keep Your Distance** – when wildlife is present, fly at 400 ft AGL or the highest safe altitude under FAA Part 107. If disturbance is noted, depart the area and land as soon as possible.

**Spread the Word** – encourage others to follow ECO-Drone guidelines and fly respectfully. Carry copies of this postcard and utilize social media to inspire other drone operators and businesses.
